Renaissance Selected to Develop Medical Practice Portal

TEL AVIV, Israel - March 6, 2008 - Renaissance Computer Systems Ltd. announced today that it was selected by Micro-Office Systems, Inc.(Cleveland, Ohio) to develop a Medical Practice Portal that will be the central element in its upcoming suite of solutions for medical offices.

"This is a high-performance engine that must interface with a large variety of existing systems and software" said Jackie Goldstein, founder and President of Renaissance Computer Systems. "Our experience in developing complex distributed applications will ensure that the Micro-Office Systems solutions will be based on a well-architected and implemented foundation and will be adaptable enough to meet future demands and extensions."

According to Norman Efroymson, CEO of Micro-Office Systems: "There is a strong shift occurring in healthcare now, with much more emphasis on the patient as a consumer. We are providing important tools to enable this, and therefore it was important to us to partner with a company that would provide the components needed to complete our solution in a timely, reliable and reasonable manner. After researching many options, we were confident that Renaissance would be that partner."

[Micro-Office Systems](#) is a leading software customizing firm specializing in enhancing medical practice management systems. Established in 1985, we currently provide interfaces, conversions, reports and add-ons to help practices get the most benefit from their practice systems.

[Renaissance Computer Systems Ltd.](#) is a leading business solutions provider specializing in custom software development, strategic technology consulting, and focused training for a wide range of organizations around the world. Since 1991, Renaissance's mission has been to enable clients to meet the challenges of the competitive business environment through the intelligent use of Microsoft tools and technologies.
